

National Verification IWT

- Establish a National Verification Integrated Work Team
 - ▶ To advocate and oversee the development of an IFPS/NDFD verification infrastructure

- Refine the functionality and displays for a forecaster critique
- Define for purposes of verification the sensible weather elements within the NDFD
- Establish a prototype for NDFD Verification
- Determine the initial suite of verification scores for national and local verification

- Continue established verification programs for long term verification needs and expand to additional sites
- Establish an NDFD archive for verification
- Establish for verification purposes a National Digital Observation Database
- Establish a National Digital Guidance Database and archive of sensible weather elements

- Establish a National Digital Climate Database in a format useful for verification
- Establish a National Verification Database and archive
- Investigate new scores and new ways to diagnose and analyze verification information
- Establish training for proper use and interpretation of verification results through the National Training Program
